| **Marks** | 1.00/1.00 |
| **Grade** | **10.00** out of 10.00 (**100**%) |

**Question 1** | Correct Mark 1.00 out of 1.00

**Problem Statement:**

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

**Output Format**

First Line Contains Integer – Floor value for x

**Answer:** (penalty regime: 0 %)

```c
#include <stdio.h>

int findFloor(int arr[], int low, int high, int x) {
    if (low > high)
        return -1;

    int mid = low + (high - low) / 2;

    if (arr[mid] == x)
        return arr[mid];

    if (arr[mid] < x) {
        int result = findFloor(arr, mid + 1, high, x);

        if (result != -1)
            return result;
        else
            return arr[mid];
    }

    return findFloor(arr, low, mid - 1, x);
}

int main() {
    int n, x;

    scanf("%d", &n);

    int arr[n];

    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    scanf("%d", &x);

    int floor = findFloor(arr, 0, n - 1, x);

    printf("%d\n", floor);

    return 0;
}
```
